THE COMMUNITY APP FOR SMART CITIES

The CITYCoP project looks for common features and best practices embraced by successful **community policing apps** worldwide and aims then to **produce a uniquely European solution including a smartphone app and an on-line portal**, to be deployed in every European city while still retaining its “local flavour”. Four pilot cities have been selected to test the CITYCoP system developed by the project: **Bucharest, Florence, Lisbon and Sheffield**, where a **training scheme** will be developed to assist both officers and citizens in the uptake of the solution.
